

POST TREATMENT CARE INSTRUCTIONS FOR KYBELLA

Common side effects of Kybella include swelling, bruising, pain, numbness, redness and areas of hardness around the treatment site.

Other possible side effects include trouble swallowing and nerve injury in the jaw that may cause an uneven smile or facial muscle weakness. The latter side effect seen in the trials resolved spontaneously (range 1-298 days, median 44 days).

You should see gradual results of Kybella within the next 4-8 weeks.

Multiple treatments may be necessary to achieve full desired results, usually between 2-6 sessions.

Follow up is recommended in 6-8 weeks from date of injection.

Please contact the office if you have any questions or concerns, (360) 982-2620.
